Translator Update 1 and Additional Features Plan

Answer the questions below and submit them as a PDF. Please try to keep it brief.

1. At this point, you have hopefully started on your translator. Briefly describe your overall plan for the translator. What language are you using? What is your approach to parsing? Is this a compiler-style or interpreter-style translator?

2. What challenges do you foresee or have you encountered already?

3. At this point, you might want to start thinking about additional features you can add to your language (unless you are content with a C). What are some things you would like to do and how do you plan to approach them? Keep in mind that this does not bind you to having to deliver what you mention here. It is only to get you thinking about it.

4. List any questions or concerns you have about the project so far. Again, I do not have time to "grade" or give feedback on everyone's work so far. But I can address any specific questions or concerns you might have.

5. Give a brief summary of what each member of your group has done so far.
